

THE GERBING HERITAGE

In 1975, a motorcyclist rides to work at an aeronautical machine shop. It's frigid, wet, and blustery. The faster he goes, the colder he feels. The machine shop owner/engineer is inspired; Gerbing heated clothing is born.

For over 40 years, Gerbing has been the industry leader in developing heating technologies to overcome cold weather conditions. The Gerbing patented Microwire® system is composed of thousands of conductive filaments 1/10th the thickness of a human hair. Each garment is controlled by a sophisticated power management & distribution system.

We were born from aeronautics, fueled by a passion for powersports, and engineered to keep you warm in the most frigid riding conditions.
